

Hydraulic I/O Module TTC 30XH

General Description

The TTC 30XH is an I/O slave module which is designed for cost sensitive applications demanding a high number of PWM outputs. The TTC 30XH is a member of the TTC 30X family, which consists of different I/O slave modules that are controlled using CANopen® protocol. The TTC 30X family is part of a complete and compatible product range for the off-highway industry. The modules are protected by compact automotive style housings which are highly suited for rough operating conditions. They provide a wide range of flexible configurable I/Os and allow local current control using PWM outputs.
